Block - 1 Aptitude

1) The average of 5 number is 20
Find sum

Avg = 20

Number = 5

= 20 × 5

= 100

2) The average of 10 Number is 15 1 number is removed, avg is 14. Find the removed Number

Soln

Sum = 10 × 15 = 150

1 Number is Removed

New avg = 14

New sum = 9 × 14 = 126

= 150 − 126

= 24

3) A container has milk and water ratio 3:2, add 10L of water become 3:4. Find inital quantity

Milk : water = 3 : 2 $\quad 3+2=5$

Let total = $5x$

Milk = $3x$

water = $2x$

10 Liter water = $2x+10$

= 3 : 4

$$\frac{\text{water}}{\text{Milk}} = \frac{3x}{2x+10} = \frac{3}{4}$$

$$4(3x) = (2x+10)3$$

$$12x = 6x + 30$$

$$6x = 30$$

$$x = 5$$

$5x = 5 \times 5 = 25$ litre

④ Find avg of first 20 Nature Number

$$\text{Avg} = \frac{\text{First} + \text{Last}}{2}$$

$$= \frac{(1+20)}{2} = \frac{21}{2}$$

$$= 10.5$$

5) avg age of 5 student is 18, A new student join and the average become 19 Find age of New student

Avg of 5 Student = 18

$5 \times 18 = 90$

After one join

Student = 6

New avg = 19

$6 \times 19 = 114$

Age of New Student

$114 - 90 = 24$ //
